# Apollo Security
EZ-Kit

Features

- Embedded Software no installation needed
- Card Readers / Contactless Mobile Readers
- Power supply & battery
- Enclosure / Blister Pack
- Easy to configure
- Robust devices, long lasting
- Cost effective

With ASP Series Controller

ASP-4   **ASP-2**

- 4 readers / doors control (ASP-4)
- 2 readers / doors control (ASP-2)
- TLSv1.3 , AES256-SHA256 Encryption
- 5000 cardholders (for EZ-Kit)
- 100,000 events in under 10 seconds

*See ASP datasheet for complete Information

Apollo EZ Kit – Affordable, Scalable & Robust Access Control The Apollo EZ Kit is a complete 2-door or 4-door access control system, designed for seamless and secure access management. It includes card readers or contactless mobile readers, an enclosure, power supply, backup battery, and access cards, making it a cost-effective solution with a lower price per door.

With embedded software, there's no need for PC installation—simply connect via IP address to access powerful features like reporting, access levels, maps, holiday scheduling, and more. The system also supports expansion with a secure downstream reader interface module, allowing for scalable growth while maintaining encrypted communication for enhanced security.

Built with a durable and robust access control panel, the Apollo EZ Kit ensures long-lasting security and reliability.

EZ-Kit Embedded Software Features

Advance Monitoring

- Live events
- Alarm management
- Manual commands
- Interactive maps
- Events filter
- Controller and Access Points status
- Multiple window dashboard
- Notification & emails

Cardholder Management

- Easy enrollment
- Cardholder pictures
- Automatic activation / deactivation
- User roles

Other Features

- Mobile Application
- Special days
- Time & Attendance
- Access Mode Schedule

Access Control Features

- Input/Output linkages
- OSDP reader support
- Access point mode
- Anti-Passback
- Mustering
- Holidays & Schedules
- Access Levels
- Advance reporting

System Expansion

For system expansion, the Apollo EZ Kit supports secure downstream reader interface modules the Apollo RI-2M, enabling easy scalability for additional doors and readers. These modules ensure encrypted communication, maintaining high security and seamless integration while growing with your access control needs.
